

# TIFOO

Flash rust remover

# MANUAL

### Flash rust remover

#### Security

Please work always with safety gloves and glasses. Besides that, read the instructions and security indications on the label.

#### Application fields

Removes flash rust and loosens light rust without problems. Suitable for every iron object, steels of every class and castings. Whether it's rims, brakes, pump components or garden ornaments: everything can be treated without any problem. This product is not meant to remove strong rust or rust that already entered into the material.

#### Using the Flash rust remover

Before using the Tifoo Flash rust remover, please degrease the objects thoroughly either with steel wool, or with water and soap to remove the loosened rust with steel brush. In order to degrease the objects, you can fall back on our Tifoo Degreaser or use benzine or acetone.

This product is designed for the use by immersion. Only wiping won't have any effect. Put the dry objects in question in a plastic tank and pour the Tifoo Flash rust remover over them until they're completely covered by it. Let the solution work in for at least 4 hours. In case of strong rust, you should wait even a lot longer, like between 12 and 24 hours. Then rinse with water, wipe the rust off that may still be there and dry the iron / steel object. Important: This product removes rust, but doesn't protect from future corrosion!

#### Disposal

Consult you local centres of waste disposal or recycling centres.
