PATINATION

# MANUAL

## PATINATION

### Checklist

Please clean and degrease the metal object thoroughly before treating it with the Tifoo patination solution. For that, we recommend our copper cleaner, which can be purchased in our online shop.

### Security

Avoid contact with skin. Use tweezers or wear protective gloves and protective glasses. Don't touch the object with your fingers because finger prints avoid an even effect of the solution and you won't have good results.

### Application fields

#### **Suitable materials:**

Brass, copper and bronze.

#### **Unsuitable materials:**

silver, aluminium, chromed and nickel-plated surfaces

## Using the patination

As this product is a concentrate, it has to be diluted with water according to the planned operation: if you want to apply it by painting, dilute it to a 1:2 until 1:3 ratio; for an application via immersion bath, dilute it to a 1:5 ratio. Apply the diluted solution evenly on the brass, copper or bronze object and let it react until the desired effect. Alternatively, dip the metal object in the diluted solution (1:5 ratio) and turn it regularly until the desired patination.

In order to cancel the process, you only have to wash the object with water. Without washing, the object won't stop getting darker. In the end, wash the metal object thoroughly with water and polish it with a soft piece of cloth.
